  pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                            Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at

The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myccardial ischaemias; wound healing;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are protein sequences are and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agoninvention. The breast and ovarian cancer associated DNA, protein, agoning the protein and characterisation cancer associated DNA, protein, agoning the protein and characterisation cancer associated DNA, protein, agoning the protein and characterisation cancer associated DNA, protein, agoning the protein and characterisation cancer associated DNA, protein agoning the protein and protein accordance and protein acco

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
```

Page; 1017pp; English

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a but to parform the method of an area of the respective of the pain and a but to parform the method of an area of the parform the method of the parform the method of the parform the method of the parform the parform the method of the parform the parform the parform the method of the parform the parform the parform the parform the parformance of t

colaimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for polynucleotides of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a pharmaceutical composition, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypuclectide or the compound that polypeptides or their antibodies. The polypuclectide or the compound polypucletides its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at or human polynucleotides or a polynucleotide which represents derivative or allelic variation of the nucleic acid sequence. The invention discloses a composition comprising two ftp.wipo.int/pub/published_pct_sequences specification, but was obtained in electronic represents a or more isolated rat Also fragment,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a CC polynucleotides, a method for producing a pharmaceutical composition, a CC polynucleotides, a method for producing a pharmaceutical composition, a CC method for identifying a compound or small molecule that regulates the CC activity in an animal of one or more of the polypeptides given in the Expectification, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition composition to reacting CC pain and a pharmaceutical composition compositing the one or more CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction CC pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene CC therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: CT the sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic form directly from WIPO at CT first part of the printed CC first wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                          claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which results the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form pair of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                         The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragme derivative or allelic variation of the nucleic acid sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADE63995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating modulates its activity is useful for preparing a medicament for treating modulates its activity (SNI) in an animal (e.g. gene injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at fig. wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
             The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent
                                                                                                                                                                                                                                                                                                                                                                      14-AUG-2001; 2001US-0312147P

                                                                           The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABV77873-ABV78116 and ABP65061-ABP65267 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a patient, for manufacture of a medicament for treating hypoxia-regulated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic; vasotropic; tranquiliser; antiatherosclerotic; gene therap antiinflammatory; vulnerary; gynecological; ophthalmological; vaccine; hypoxia; tumourigenesis; angiogenesis; apoptosis; tumourigenesis; angiogenesis; apoptosis; neonatal stress; ischaemic condition; reperfusion injury; retinopathy; neonatal stress; preeclapmsia; atherosclerosis; inflammatory condition; wound healing;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្តន្តន
The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, comprising to allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a componing to the polynucleotide sequence kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence composited to pain, a method for identifying an agent compound which regulates the expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of the polynucleotides given in the composition, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

                                                                                                                                                                        The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs and even in those cases where therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2000-500381/45.

                                                                                                                                                                                                                                                                            This sequence is the La autoantigen binding domain (LAP). LAP is a cellular protein which binds to an internal ribosome entry site (IRES). The peptide is used to inhibit mRNA translation, viral protein translation or viral replication. Viral mRNA translation is initiated at the IRES and the LAP peptide prevents translation initiation factors from binding at the site. The peptide can be used alone or in combination with an inhibitor RNA (IRNA see AAZ45200). The LAP peptide is useful as an antiviral agent, which works through the inhibition of mRNA translation, especially viral mRNA. Examples of viruses which can be inhibited are picornavirus, adenovirus, and parainfluenza virus, poliovirus, rinovirus, coxsackie virus, encephalomyocarditis virus, foot-and-mouth disease virus, echo virus, hepatitis C virus, infectious bronchitis virus, duck and branchitis C virus, infectious bronchitis virus, duck and branchitis C virus, infectious bronchitis virus, duck and branchitis C virus of the contribution of the contributi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Das
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            La autoantigen; LAP; internal ribosome entry site; IRES; translation; viral replication; IRA, antiviral agent; piccornavirus; flavivirus; coronavirus; hepatitis virus; rhabdovirus; adenovirus; coxsackie virus; parainfiluenza virus; poliovirus; rhinovirus; encephalomyocarditis virus; foct and-mouth disease virus; echo virus; infectious bronchitis virus;

                                                                                                                                                                                                                                                                                                                The present invention relates to peptides and methods of inhibiting the reglication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                       Viral replication inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New compound containing acidic and aromatic amino acids, useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Viral replication inhibitor; IRES initiated translation; IAP; internal ribosome entry site initiated translation; La antigen p viral life cycle; antiviral therapy; pharmaceutical; veterinary; agricultural; horticultural; virucide.

New compound containing acidic and aromatic amino acids, useful antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. as

Claim 10; Page 16; 19pp; English.

The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents

Patent No. US20020173475A1

GENERAL INFORMATION:
APPLICANT: Dasgupta, Asim
APPLICANT: Dasgupta, Asim
APPLICANT: Baidya, Narayan
TITLE OF INVENTION: METHODS TO INHIBIT VIRAL REPLICATION
FILE REFERENCE: 220002054822
CURRENT APPLICATION NUMBER: US/09/836,073
CURRENT FILING DATE: 2002-10-24
PRIOR APPLICATION NUMBER: 09/316,630
PRIOR APPLICATION NUMBER: 09/316,630
PRIOR PRIOR PRIOR FILING DATE: 1999-05-21

NUMBER OF ENT IN NOC. 10
                                                                                                                                                                                                                                                                                                                                                                                                       문

compound that regulates the activity of one or more of the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity in an animal of one or more of the polymucleotides, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction the specification) which is differentially expressed during pain. RESULT 13
ADE62859
subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypoptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypoptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction in the composition of the polymoptide or the compound that a construction are the compound that a compound the compound are the compound that the compound that are the compound that the compound that are the compound that are the compound that are the compound that the compound that are the compound that the com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention discloses a composition comprising two or more isolated r or human polynucleotides or a polynucleotide which represents a fragmen derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human Protein P05455, SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADE62859 standard; protein; 408 AA
                                                                                                        injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rat Protein P38656, SEQ ID NO 9935.
                                                                                  pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the print of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 14-AUG-2002; 2002WO-US025765
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rattus norvegicus..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADE63989;

                                                                                                                                                       S
                                                                                                                                                                                                                                                                                밁
                                                            RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cellicomprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound useful in treating specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition the contractivity of the polynetides given in the specification, a method for identifying a compound useful in treating
                                                                                                                                                                                                 Best Loc

                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                    pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human;

Cor human polynucleotides or a polynucleotide which represents a fragment, comprising the work polynucleotide sequence. Also comprising the wector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence comprising the westor, a method for identifying a nucleotide sequence that increases or decreases the expression of the polynucleotide sequence contains a differentially regulated in an animal subjected to pain and a subjected to pain, a method for identifying an agent compound that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of the polynucleotide sequence compound that regulates the activity of one or more of the polynucleotides and the compound or more of the continuity in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a continuity in an animal of one or more of the polypeptides given in the contributes or their antibodies. The polynucleotide given in the conjunction of a pharmaceutical for proparing a medicament for treating pain and a pharmaceutical for proparing a medicament for treating conjunction of the polynucleotide or the compound that regulates the conjunction of the polynucleotide or the compound that regulates the conjunction of the polynucleotide or the compound that regulates the conjunction of the polynucleotide or more of the polynucleotide or the compound that regulates the conjunction of the polynucleotide or the compound that regulates the one or more of the polynucleotide or the conjunction of the polynucleotide or the constriction of the polynucleotide or the polyn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-AUG-2001; 2001US-0312147P.

                                                                                                                                                                                                                                                                                                                 á
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to methods for identifying genes and cc proteins that are implicated in a specific disease or physiological ccondition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a cc second specialised cell type, under two experimental conditions, and cc identifying a gene that is differentially regulated in the two experimental conditions, and comprises under experimental conditions. ABV77873-ABV78116 cc and ABP65061-ABP65257 were identified using the methods of the invention. Cc The coding sequences and proteins are useful for treating a disease in a cc patient, for manufacture of a medicament for treating hypoxia-regulated cc conditions, and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated pathology in a patient. The coding sequences and proteins are also useful cc condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropoiesis or hair loss
                                                                                                                                                                                                                                                                                                                                                                     Query Match

The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, clearivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a complex comprising the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotide, a method for producing a pharmaceutical composition, a method for identifying a compound undersome the compound that regulates the cativity in an animal of one or more of the polynucleotide given in the composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more complypeptides or their antibodies. The polynucleotide or the compound that polypeptides or their antibodies. The polynucleotide or the compound that composition comprising a medicament for treating pain (e.g. spinal segmental nerve injury (chung), chronic constriction conjury (chung). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the printed specification will shed not enterprise.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-AUG-2001; 2001US-0312147P

                                                                                                                                                                    5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors
                                                                                                                       Sequence 92
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EP1033401-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene

                                                                                                                                                                                                                                                                                                         The human lupus antigen (La) is diagnostic for Sjogren's syndrome, as well as occurring in systemic lupus erthematosus patients. The La protei is clinically related to the Ro protein that is highly common among autoimmune patients. La and Ro antigens sometimes reside on the same cellular ribonucleoprotein particle; most La patients contain some Ro antibodies and vice versa. La cDNA has been isolated from a human liver library. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   rhabdovirus, adenovirus, and parainfluenza virus, poliovirus, rhinovirus, coxsackie virus, encephalomyocarditis virus, foot-and-mouth disease virus, echo virus, hepatitis C virus, infectious bronchitis virus, duck and human hepatitis B virus, and vesicular stomatitis virus. The peptide also inhibits replication of the above viruses. The LAP peptide selectively inhibits viral protein translation, and is therefore not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is the La autoantigen binding domain (LAP). LAP is a cellular protein which binds to an internal ribosome entry site (IRES). The peptide is used to inhibit mRNA translation, viral protein translation or viral replication. Viral mRNA translation is initiated at the IRES and the LAP peptide prevents translation initiation factors from binding at the site. The peptide can be used alone or in combination with an inhibitor RNA (IRNA see AAZ45200). The LAP peptide is useful as an antiviral agent, which works through the inhibition of mRNA translation, especially viral mRNA. Examples of viruses which can be inhibited are picornavirus, flavivirus, coronavirus, hepatides as of C viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New yeast inhibitory peptide useful for inhibiting viral translation and replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-DEC-1999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New compound containing acidic and aromatic amino acids, useful antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

                                                                                                                                                                                              The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                          New compound containing acidic and aromatic amino acids, antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Viral replication inhibiting

The peptides of the invention compete with LAP and inhibit the utilisation of various biochemical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   internal ribosome entry site initiated translation; La antigen p viral life cycle; antiviral therapy; pharmaceutical; veterinary; agricultural; horticultural; virucide; mouse.
                                                                             La autoantigen; LAP; internal ribosome entry site; IRES; translation; viral replication; IRNA; antiviral agent; picornavirus; flavivirus; coronavirus; hepatitis virus; rhabdovirus; adenovirus; coxsackie virus; parainfilenza virus; poliovirus; rhinovirus; encephalomyocarditis virus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New compound containing acidic and aromatic amino acids, useful antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.
                                                                                                                                                     Human la autoantigen peptide
                                                                                                                                                                                  14-MAR-2000
                                                                                                                                                                                                              AAY52200;

New compound containing acidic and aromatic amino acids, useful antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications.

Claim 10; Page 16; 19pp; English.

The present invention relates to peptides and methods of inhibiting the replication of viruses that utilise internal ribosome entry site (IRES) initiated translation, and/or inhibiting viruses that utilise the La antigen protein (LAP) in any phase of their life cycle. The peptides of the invention compete with LAP and inhibit the utilisation of various blockmenical and physiological functions of LAP required for a productive life cycle. The methods and compositions are useful as antiviral therapy in pharmaceutical, veterinary or agricultural/horticultural applications. ABG72101-ABG72119 represent peptides useful as antiviral agents
